

Mag-nificence™

Mag-nificence offers two different applications of topical magnesium—lotion and spray—to provide effective ways of increasing cellular absorption of this essential mineral.

What is magnesium?

Magnesium may be one of the most essential elements to living organisms. Its function in the human body is vast—everything from electrolyte maintenance to metabolism to heart health and so much more can be traced back to magnesium. Supplemental magnesium can help create a body in balance and lead to improved health in a number of areas.

As an essential mineral, magnesium is involved in more than 300 enzymatic reactions inside the body, involving glucose, fat, and protein. In its most prominent role, magnesium is critical to the utilization and production of energy during cell metabolism. Consider that magnesium is the second-most-abundant, positively-charged ion in the cell fluids, and you can see how the transfer, storage, and utilization of intracellular energy rely on this mineral.

In addition to its effect on energy, magnesium also affects the central nervous system, neuromuscular system, and the cardiovascular system. It produces and transports energy, synthesizes protein, transmits nerve signals, and relaxes muscles. About 65 percent of all the body's magnesium resides in bones and teeth, and the mineral plays a key role in the health of both.

The remaining percentage of magnesium can be found in muscle and tissue cells and body fluids with the highest

Key Benefits and Features

- Critical to energy production at the cellular level
- Supports healthy bones, teeth, heart tissues, and brain cells
- Relaxes muscles and eases athletic injury
- Lessens or eliminates headache pain
- Natural cellular protectant
- Restores cellular magnesium levels
- Facilitates safe and effective detoxification
- Involved in over 300 enzymatic reactions
- Lotion and spray

concentrations in the heart and brain cells. This speaks to magnesium's value in cardiovascular and neurologic health.

Magnesium is essential to your health. Without it, numerous biological processes would never occur.

About Mag-nificence

Mag-nificence provides two ways to apply readily available magnesium, absorbed topically, not consumed orally—a departure from most AIM nutritional products. One of the most effective ways to get magnesium into the cells is by absorption through the skin. Magnesium is not easily broken down and used by the body, and the older we get, the harder it is to get adequate absorption through an oral application.

Both Mag-nificence products—lotion and spray—effectively assist the body in maintaining whole-body health.

The lotion provides topical magnesium in a fragrance-free, moisturizing blend of shea butter, coconut oil, and jojoba seed oil. The magnesium spray delivers a high concentration of this essential mineral.

Regardless of the method, the intensity of Mag-nificence may be felt as it treats the body, balancing and restoring it to greater youth, tone, strength, beauty, health, and well-being.

The efficacy of the Mag-nificence products may be noticed after consistent use of the lotion or spray. Consistent use assists the body in restoring balance and health through cellular rejuvenation.

How to Use.

Magnesium Lotion

Generously apply the lotion onto clean skin and smooth in gently. Avoid contact with eyes, mouth, and sensitive areas. Some individuals may experience a tingling sensation on the skin after applying the lotion, but this is normal.

The lotion's topical magnesium supplements the intake of this essential mineral while moisturizing the skin with shea butter, coconut oil, and jojoba seed oil.

Each bottle supplies 6,168 mg of elemental magnesium.

Magnesium Spray

Spray onto skin and rub in gently. Use caution around the eyes, the mouth, and other sensitive areas. It is normal for some individuals to experience a tingling or slight stinging sensation on the skin upon application.

The spray may be applied regularly and often, providing a high concentration of topical magnesium.

The combined use of the Mag-nificence products speeds up the delivery of magnesium to the cells.

Each bottle supplies 7,731 mg of elemental magnesium.

Q & A

I started using Mag-nificence, and I feel worse. Why?

The intensity of the Mag-nificence products may result in a normal body process called detoxification. This can manifest itself in fatigue, rashes, and headaches, and edema can occur. It is your body flushing out toxins. For more information, see AIM's Detoxification Datasheet.

How can I test for a magnesium deficiency?

Unfortunately, there is not a good test to detect magnesium deficiency. A blood test will not show low intracellular magnesium since only about 1 percent of the body's total magnesium is in the blood.

Who is deficient?

Magnesium deficiency can result from inadequate intake, reduced absorption, or excessive excretion—risk factors that manifest themselves in specific ways such as overuse of laxatives, diuretic therapy, kidney disease, alcoholism, anorexia, severe diarrhea, and malabsorption syndromes. In addition, two common societal problems, physical stress and a high-starch diet, may increase the body's need for magnesium.

Symptoms of magnesium deficiency cover a broad spectrum because magnesium is involved in so many different processes in the body. Subtle symptoms include muscle aches, pains, cramps, insomnia, and headaches. Low energy and regular fatigue are also signals of low magnesium. Serious symptoms include high blood pressure, heart palpitations, difficulty breathing, osteoporosis, and digestive problems.

Is Mag-nificence the same as AIM Cell Wellness Restorer?

The two products, while both providing supplemental magnesium, are fundamentally different in the way that they are produced. Both Cell Wellness Restorer and Mag-nificence products provide supplemental magnesium but in unique concentrations and delivery systems.

Is there anyone who should not use Mag-nificence?

Do not use if you are sensitive to magnesium or if your physician has restricted your magnesium intake. Use caution if you have any open cuts or abrasions. Keep out of reach of children. Not for oral consumption.
